

MANDATORY SAFETY ADVISORY

DATE: November 26, 2025

TO: All Contractors, Competent Persons, Safety Managers, and Personnel Utilizing the SAPS® Anchor System

**SUBJECT: OFFICIAL RELEASE OF SAPS® MANUAL ADDENDUM V1.1 –
MANDATORY EXTENDED CLEARANCE AND TRAJECTORY CONTROL®
PROTOCOL**

This advisory serves as an **urgent notification** regarding a critical update to our safety documentation. Effective **November 18, 2025**, all projects utilizing the Patented **Structural Anchor Post System (SAPS®)** must comply with the requirements detailed in the attached **SAPS® Manual Addendum V1.1**.

This Addendum is not optional; it integrates enhanced **Trajectory Control® (TC)** geometric requirements with strict operational mandates. Its primary purpose is to formalize the engineering commitment that achieves a **Maximum Arresting Force (MFA) of less than 1,000 lbs** on the end-user—a performance standard significantly exceeding OSHA requirements.

Immediate Action Required:

- 1. Review and Implement:** All personnel involved in the installation, removal, or use of the SAPS® system **must immediately review** this Addendum.
- 2. JHA Protocol:** The new mandatory JHA requirements (Section 1.A) must be implemented for all affected tasks and signed off by all personnel **prior to the next shift change or operation commencement**.
- 3. Site Responsibility:** The **Contractor** and **Competent Person** must strictly adhere to the manufacturer's guidelines for the specified **Type 2 SRL**, as failure to do so **voids the protective guarantee** and the engineered force reduction.

Your strict adherence to these geometric and procedural mandates is required to maintain the validity of the SAPS® safety envelope.

Sincerely,

Manny Carrillo Safety Anchor Post®
